## *Section B: Data Coding*

---

Maria Segui-Gomez, MD, MPH, ScD

# Mortality Codes

- Coding the injuries (i.e., nature of injury)
  - International Classification of Diseases
  - Basic tabulation list
- Coding how they happened (i.e., circumstances surrounding injury)
  - International Classification of Diseases
  - NOMESCO Classification of External Causes of Injuries
  - New Zealand, Australian codes
  - International Classification of External Causes of Injury (ICECI)

# *Coding System*

- In general, coding system should be
  - Exhaustive and exclusive
  - Simple to use and reliable
  - Flexible (over time), yet consistent

# *International Classification of Diseases (ICD)*

- World Health Organization
- Periodic revisions, currently 10th version (9th version expired in late 1990s)
- Coding follows strict rules outlined in documentation and requires training
- Codes injury information and cause of injury (chapter XX in ICD-10)
- Highly structured and systematized
- “Yet, there are differences in practice across settings even in highly developed countries”

## *ICD-9 and 10 Examples of Injury Types*

<b>ICD-9</b>	<b>ICD-9</b>	<b>ICD-10</b>	<b>ICD-10</b>
<b>800</b>	Fracture of vault of skull	<b>S02</b>	Fracture of skull and facial bones
		<b>S02.0</b>	Fracture of vault of skull
<b>871</b>	Open wound of eyeball	<b>S05</b>	Open wound of eye and orbit

## *ICD-9 and 10 Examples of External Cause*

<b>ICD-9</b>	<b>ICD-9</b>	<b>ICD-10</b>	<b>ICD-10</b>
<b>E924.0</b>	Hot liquids and vapors including steam	<b>X11</b>	Contact with hot tap water
		<b>X12</b>	Contact with other hot fluids
		<b>X13</b>	Contact with steam and hot vapors
		<b>X14</b>	Contact with hot air and gases
<b>E886</b>	Fall on same level from collision, pushing or shoving, by or with other person	<b>W03</b>	Fall on same level due to collision with, or pushing by, another person

## *ICD-9 and 10*

- When presenting ICD data you can use the framework presented in MMWR 1997; 46 RR14

## *For Comparability Reasons*

- Mapping between ICD-9 and ICD-10
- Standard categories to present injury and event codes
- ICD-9 had injury codes and external cause codes (e-codes) needed to code both
- ICD-10 offers one single code to reflect both aspects
- ICD-10 has supplemental codes to reflect place of occurrence and activity

# *NOMESCO Classification of External Causes of Injury*

- Nordic Medico-Statistical Committee
- Developed in 1984, revised in 1990
- It aims to describe the sequence of events leading to the injury
- The injury itself must be coded with ICD

## *Basic Tabulation List*

- WHO constitutional mandate to maintain statistical services
- Simplified version of ICD
- World Health Statistics Annual presents data submitted by individual member states
- Cause-of-death data, based on underlying cause of death, is presented using a specified format for purposes of consistency and comparability
  - Basic Tabulation List for ICD-9 (BTL) prior to ICD-10
  - Tabulation List for ICD-10 (TL10) has been developed
- For example, motor vehicle traffic accidents, accidental poisoning, World Health Statistics Annual, 1996, WHO, 1998
