Standards and Guidelines
and Ethical Code of Conduct

Patrick N. Breysse, PhD, CIH
Peter S.J. Lees, PhD, CIH

Johns Hopkins University
Section A

Historical Perspective
Hatch Curve

- Implications:
  - Man-environment interaction is complex
  - Shift in emphasis from overt illness to physiological disturbances that may be precursors of disease
Section B

ACGIH Threshold Limit Values and Biological Exposure Indices
Threshold Limit Value (TLV)

- **Threshold limit values (TLVs)** refer to airborne concentrations of substances and represent conditions under which it is believed that nearly all workers may be repeatedly exposed day after day without adverse health effects.
Threshold Limit Value (TLV)

- Because of wide variation in individual susceptibility, however, a small percentage of workers may experience discomfort from some substances at concentrations at or below the TLV.

- A smaller percentage may be affected more seriously by aggravation of a pre-existing condition or by development of an occupational illness.

Continued
Threshold Limit Value (TLV)

- Published by ACGIH
- Established in 1946 (updated annually)
- Approximately 750 chemicals covered
- Guidelines not law
- Documentation of TLVs and BEIs
- Method of adoption
- “Balancing of health considerations and cost to industry” –ACGIH 1948
# Examples of TLVs

## Adopted Values

Source: Adapted from TLV book
Typical Time Constants

- **Time-weighted average (TWA)**
  - Contaminant concentration averaged over a period of time; usually over a full work shift—i.e., eight-hour TWA
Typical Time Constants

- *Short-term exposure limit (STEL)*
  - Contaminant concentration averaged over a 15-minute period
Typical Time Constants

- **Ceiling**
  - Instantaneous concentration; or concentration averaged over a 15 minute period if technology does not exist to measure instantaneous concentrations
Skin Notation

- \textit{Skin notation (S)} indicates substances for which there is the potential for substantial contribution to exposure via adsorption through the skin

  - Examples:
    - Diazanon
    - Chlordane
    - Carbon disulfide
    - Benzene
Sensitizer Notation

- Listed substances followed by the *sensitizer notation (SEN)* refer to the confirmed potential for worker sensitization as a result of dermal contact and/or inhalation exposure
  - Examples
    - Formaldehyde
    - Flour dust
    - Glutaraldehyde
Carcinogenicity Classification

- A1: Confirmed human carcinogen
- A2: Suspected human carcinogen
- A3: Confirmed animal carcinogen with unknown relevance to humans
- A4: Not classifiable as a human carcinogen
- A5: Not suspected as a human carcinogen
Excursions

- *Excursions* are concentrations above the TLV and are permitted as long as they are balanced by concentrations below the TLV such that the eight-hour TWA is less than the TLV

- Refer to the magnitude of these elevated concentrations and current guidance is that up to 30 minutes at three times the TLV is permitted but five times the TLV is not permitted
Biological Exposure Indices (BEIs)

- Measurement of chemical determinant in a biological media
- Examples
  - Acetone in urine
  - S-Phenylmercapturic acid (metabolite of benzene) in urine
  - n-Hexane in end-exhaled air
  - Lead in blood
Section C

Occupational Safety and Health Administration (OSHA) Standards
Permissible Exposure Limits (PEL)

- Set by OSHA
- Established in 1970 (rarely updated)
- Antecedents—Walsh Healey, TLV, ANSI
- Approximately 450 chemicals covered
- Eight-hour TWA, STEL, and C
- Z table and complete standards
- Legally enforceable
- Method of promulgation
Each employer

“Shall furnish to each of his employees employment and a place of employment which are free from recognized hazards that are causing or are likely to cause death or serious physical harm to his employees;

Shall comply with occupational safety and health standards promulgated under this Act.”
Criteria for PEL from OSHA Act

“The Secretary, in promulgating standards dealing with toxic materials or harmful physical agents under this subsection, shall set the standard which most adequately assures, to the extent feasible, on the basis of the best available evidence,…
Criteria for PEL from OSHAct

- … that *no employee* will suffer material impairment of health or functional capacity even if such employee has regular exposure to the hazard dealt with by such standard for the period of his working life”

- Scope and application
- Definitions
- PELs
- Regulated areas
- Exposure monitoring
- Methods of compliance
- Respiratory protection
- Protective clothing and equipment
- Med. surveillance
- Hazard communication
- Record-keeping
OSHA Terms

- *Permissible exposure limit (PEL)* is that concentration expressed as an eight-hour time-weighted average, which shall not be exceeded

- *Short term exposure limit (STEL)* is that concentration expressed as a 15-minute time-weighted average, which shall not be exceeded
OSHA Terms

- **Ceiling (C)** is that concentration which shall never be exceeded, although it is expressed as a 10- or 15-minute TWA.
- **Action level (AL)** is defined as one-half the PEL.
  - Concentrations in excess of the AL trigger specified activities in complete standards.
OSHA Terms

- *Immediately dangerous to life and health (IDHL)* signifies concentrations to substances for which exposure of more than 30 minutes would be expected to be fatal
  - Used in the selection of respirators

Continued
OSHA Terms

- OSHA does not classify carcinogens, but instead relies on the classifications made by the National Toxicology Program (NTP) and the International Agency for Research on Cancer (IARC)
Section D

National Institute for Occupational Health and Safety (NIOSH) and Other Organizations
NIOSH

- National Institute for Occupational Safety and Health (NIOSH)
  - Part of Centers for Disease Control
  - Research, recommendation, and training duties
  - Recommended Exposure limits (RELs)
Recommended Exposure Limits (RELs)

- Recommended by NIOSH
- Created by the OSHAct
- Associated with Criteria Documents
- Recommendations to OSHA
- Used as another guideline but not law
- Based solely on health considerations
- Usually below corresponding PEL
Other Relevant Organizations

- American National Standards Institute (ANSI)
- International Radiation Protection Association (IRPA)
- American Society of Heating, Refrigeration, and Air Conditioning Engineers (ASHRAE)
- Institute for Electrical and Electronics Engineers (IEEE)
Section E

Code of Ethics
Cannons of Ethical Conduct

1. Practice their profession following recognized scientific principles with the realization that the lives, health, and well-being of people may depend upon their professional judgment and that they are obligated to protect the health and well-being of people
Cannons of Ethical Conduct

2. Counsel affected parties factually regarding potential health risks and precautions necessary to avoid adverse health effects
Cannons of Ethical Conduct

3. Keep confidential personal and business information obtained during the exercise of industrial hygiene activities, except when required by law or overriding health and safety considerations.
Cannons of Ethical Conduct

4. Avoid circumstances where a compromise of professional judgment or conflict of interest may arise

5. Perform services only in the areas of their competence

6. Act responsibly to uphold the integrity of the profession
