Health Needs of Refugees

Gilbert Burnham, MD, PhD
Johns Hopkins University
Section A

Emergencies
Phases of Emergencies

- Emergencies divided into phases by death rates
  - Mostly among children
- Needs and services differ for each phase
Phases of Emergencies

Source: The CDC MMWR
Phases of Emergencies

Deaths per 1,000 per Month

Months After Camps Opened

Source: The CDC MMWR
Phases of Emergencies: Crude Death Rate

- Death rates > 1/10,000/day
  - May approach 1/1,000/day
- Death rates may be 5–60 times higher than the normal rates
  - Normal CMR for sub-Saharan Africa 0.5–0.9 deaths per 10,000 persons per day
Phases of Emergencies

- Pre-Emergency Phase
- Emergency Phase
- Post-Emergency/Maintenance Phase
- Repatriation Phase
Pre-Emergency Phase

- Events developing
- Access prevents full understanding
- Political interventions still possible
- Preparation for mass migration
Emergency Phase

- Length of emergency phase determined by excess mortality
  - Concentration is in getting mortality rates down as fast as possible
- Strong emphasis on food, water, sanitation, prevention of epidemics
- Requires a simple information system
Post-Emergency Phase

- Death rates < 1/10,000 persons/day
- Basic services in place
  - Food supply
  - Water
  - Sanitation
  - Health care
  - Shelter
Repatriation Phase

- Return home is usually spontaneous
  - Refugees make their own decisions
  - Most refugees return unassisted
Repatriation Phase

- **Role of NGOs**
  - Can provide information to inform decisions
  - Assist refugees returning
  - Rehabilitate essential services in country of origin
Key Indicators

- Crude mortality rate or death rate is one of the key indicators of health status in all phases
Estimated Excess Mortality

Cambodia: 2,500,000
Rwanda: 800,000
Somalia: 350,000
Liberia: 175,000
El Salvador: 85,000
Bosnia: 125,000
What are Health Needs in Emergencies?

- Priorities vary with phases of the emergency
  - Protection/security
  - Food
  - Water
  - Sanitation
  - Shelter
Health Care Objectives: Emergency Phase

- Treatment of common diseases
- Prevention of epidemic diseases
  - Particularly malaria
  - Excess loss of life
  - Tying up resources
Health Care Objectives: Emergency Phase

♦ Prevent endemic diseases
  – Tick-borne typhus, scabies, lice
♦ Prevent injuries
  – From hostilities or household
Health Care Objectives: Emergency Phase

- Care of the vulnerable
- Mental health services
- Reproductive health services
- Surveillance health information system
Health Care Objectives: Emergency Phase

- Services based on PHC principles
  - Community-based services
- Social and educational services
  - Needs of adolescents
- Need for information
Health Concerns in Emergency Phase

- Most deaths from five conditions
  - CFR↑

![Diagram showing the top five causes of death in an emergency phase, including Malaria, Pneumonia, Diarrhea, Measles, and Meningitis. The diagram indicates Malnutrition as a central concern.]

Continued
Health Concerns in Emergency Phase

- Risk of meningitis
  - Frightening but not often large-scale
Health Concerns of Middle Development Countries

- New problems in former Soviet bloc
  - Some epidemic diseases, e.g., head lice, typhoid
  - More concern with chronic diseases – e.g., diabetes, hyper-tension, heart disease
Health Concerns of Middle Development Countries

- Lack of medication and specialized care
  - Difficulty with existing health care protocols
- Hypothermia among the aged who cannot move
Priorities in Emergency Phase

- General health priorities
  - Water (quantity more important than quality)
  - Short-term sanitation provisions, including soap
Priorities in Emergency Phase

- General health priorities
  - Food distribution
  - Shelter
Priority Health Activities

- Disease prevention and control
  - Epidemic diseases – e.g., measles, shigella, cholera
  - Less common diseases – e.g., typhus, relapsing fever, conjunctivitis
- May require special feeding programs
Priority Health Activities

- Immunization against measles
- Basic PHC with outreach to increase coverage
- Basic health information system as early as possible
Late Emergency Phase

- Death rates generally decline
  - Both the Crude Mortality Rate and Case Fatality Rate drop
- Threats from epidemic disease may cause increases in death rates
# Programs Reaching for Basic Standards

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Food</strong></td>
<td>2,100 kcal/person/day&lt;br&gt;(Be alert for micronutrient deficiencies)</td>
</tr>
<tr>
<td><strong>Water Availability</strong></td>
<td>15–20 Liters/person/day</td>
</tr>
<tr>
<td><strong>Sanitation</strong></td>
<td>1 latrine/20 persons <em>or</em>&lt;br&gt;1 latrine/family (better)</td>
</tr>
<tr>
<td><strong>Health Care</strong></td>
<td>Death rates &lt;2/10,000/day</td>
</tr>
</tbody>
</table>
# Programs Reaching for Basic Standards

<table>
<thead>
<tr>
<th><strong>Solid Waste</strong></th>
<th>Appropriate disposal, includes safe disposal of medical waste</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Space</strong></td>
<td>30m²/person in settlement</td>
</tr>
<tr>
<td></td>
<td>3m²/person in shelters</td>
</tr>
<tr>
<td><strong>Fuel</strong></td>
<td>Adequate fuel at hand, i.e., 1kg fuel wood/person/day</td>
</tr>
</tbody>
</table>
Late Emergency Phase Concerns

- Concern over security increases
- Infrastructure-building activities
Late Emergency Phase Concerns

- Community-based activities
  - Community health workers
  - Community mobilizers
Late Emergency Phase Concerns

- Standard case definitions established
  - Standard treatment protocols
- Information system should expand
  - Good idea of denominators
- Increased concern for vulnerable population
Late Emergency Phase Concerns

- Promotion of community structure
  - Entails risks, how to control?
- Schools linked with health care
Late Emergency Phase Concerns

- Introduce income-generating activities
  - Especially for women
- Promote gardens
Maintenance or Post-Emergency Phase

- Defined by death rates
  - Approaching pre-flight or host community levels
  - Below 1/10,000 persons/day
Maintenance Phase:
Approach to Health Services

- Health services integrated with host country health services (if possible)
  - Using local referral system
  - Using host country essential drug program and treatment protocols
- May be oriented toward country of origin
Maintenance Phase: Approach to Health Services

- Health promotion and preventive services functioning well
- Services pitched at level of host or country of origin
Maintenance Phase: Approach to Health Services

- More refugee health personnel involved
- Increasing concern for health of host country community
Maintenance Phase:
More Specialized Programs

- Implementation of more specialized health care programs
  - Control of tuberculosis and leprosy
  - Reproductive health care, including control of STI, and HIV/AIDS
  - Mental health programs for persistent mental disorders
Maintenance Phase: Other Concerns

- Emphasis on improving efficiency and effectiveness of program
- Increasing concern about damage to the environment
Moving out of Program (Closure)

- Handing over of services from relief organizations
  - National NGOs
  - “Development-oriented” NGOs
  - Community-based organizations
  - Reliance on refugees for sustainability
  - Training to promote repatriation
Section B

Public Health Issues to Consider
Population Distribution of IDPs and Refugees

- Population distribution usually skewed
- Increase in vulnerable populations
- Protection issues

Source: U.S. Census Bureau, International Data Base.
Women and Children

- Health services to address needs
- Gender roles change
- Unaccompanied minors or separated children
Food and Nutrition

- Feeding refugees
  - Food sources and preferences
  - Logistics and distribution
  - Targeting populations
  - Composition of general rations
  - Special feeding programs?
  - Monitoring for micronutrient deficiencies
Environmental Concerns

- Water
- Latrines
- Solid waste
- Vector control
- Environmental damage
  - Fuel wood
  - Shelter
  - Planting
Psychosocial Issues

- Emotional stress
- Dealing with stress
- Pre-existing mental illness exacerbated
Psychosocial Issues

- Resettlement/repatriation stress
- Adolescent issues
Mental Health Services

- Low priority in acute settings
- Single episodes of emotional disorders common
- Community efforts major resource
- Violence and delayed social development
- Role of traditions and cultural activities
- Use of refugee resources
Security and Protection Issues

- Raids from country of origin
- Recruitment by insurgents
- Exploitation by host country
- Protection of vulnerable
- Protection of relief workers
- Prevention of forced repatriation
Programming Issues

- Create dependency by contracting provision of essential services
  - Food, health care, environmental health
Programming Issues

- Or enabling community to meet needs
  - Community organization
  - Community power structure
  - Volunteer vs. incentive vs. pay
Principles of Health Care to Consider

- Displaced camp
- Camp
- Dependent on rations
- Treatment at home
- Own house
- Self-settled
- Growing some food
- Treatment in health facilities
How a Health System Should Be

- Nature of health care system
  - Integration
  - PHC-based
  - Nature of illness
  - Health care workers
  - Curative vs. preventive care
