

Introduction to Demographic Methods

Session 3 Exercise

1. Which of the following are true [T] and which are false [F]?

	T	F
Unemployed persons are not in the labor force		
Housewives are included in the labor force if they are looking for work		
The results for racial categories in a census will depend on whether it is self-enumerated or not		
Age ratios can tell us about heaping and digit preference		
Age pyramids can often tell us something about the demographic history of a population		
The index of dissimilarity is useful for summarizing differences in two age distributions		
In demography we use age rounded to the nearest year		
The sex ratio at birth can be used to check data quality in a civil registration system?		
The sex ratio of most populations declines at older ages
