CELEBRATE HER LEGACY

Barbara Starfield, MD, MPH, was a University Distinguished Service Professor with appointments in the departments of Health Policy and Management and Pediatrics at the Johns Hopkins University schools of Public Health and Medicine. She was also the director of the Johns Hopkins University Primary Care Policy Center. Dr. Starfield's overriding concerns were understanding the impact of health services on health, especially with regard to the relative contributions of primary care and specialty care on reducing inequities in health. Her focus was on both clinical care and services to populations, as well as the interrelationships between the two.

Trained in pediatrics and epidemiology, she devoted her energies to health services research and its translation into health policy at the national, state and local levels. Her specific research interests were in primary care measurement, the relationship between the processes and outcomes of health care, quality of care, health status measurement (particularly for adolescents and children) and child health policy.
